

Innovative Value-Added Solutions

The EHR4CR integrated platform will ensure the trustworthy re-use of Electronic Health Records (EHR) patient-level data for Clinical Research, towards:

1. Enhancing protocol feasibility assessments
2. Accelerating patient identification and recruitment in clinical trials
3. Facilitating clinical study conduct and reporting Serious Adverse Events (SAEs)

**Faster access to effective and safe
innovative medicines**

Expected Benefits to Hospitals

- Enhance the quality of EHR data for Clinical Research
- Conduct clinical trials more efficiently
- Increase participation in a larger number of clinical trials
- Improve the hospital performance, success rate, and recognition as clinical research Centre of Excellence
- Engage in a dynamic clinical research environment to improve the quality and the continuity of care
- Access cross-sites data to optimise treatment protocols and to improve the quality of care and health outcomes
- Improve access to locally disseminated healthcare information for management and billing operations
- Generate new additional income by contributing EHR data to the EHR4CR platform
